Let's take a little trip in a little space now, a mental vision, and go back a hundred million years before there was even a star in the sky, by your mind. It was--it was God. He's always been God. And then, we're setting on--standing here watching creation come into existence. There's not a star; there's not nothing.

And then let's notice. Out yonder I see now all that space, that all is God, without form, forever, for eternities, no beginning, no ending. It's all God. Before there was even air there was God. The very beginning of nature of creation was God.

But then the Logos that went out of Him become like a little halo of Light. Let's see it playing yonder, like a child before the doorstep of the father.

And now, I can see Him as He moves over here, and He draws into His memory or His mind a picture of what the world should be. Now, there's not a star or nothing.

I hear Him say, "Let there be." **And an atom broke yonder**. And when it did, the sun came into existence and begin to whirl. She burned for millions of years and millions and millions of years. After while, I see a clinker fly off of it. [Brother Branham makes a noise--Ed.] What is it? The first star that flew from the sun. He watches it fall for a few million years and He stops it. Then another one flies off and He lets it fall a few million years and stops it. What's He doing? Writing His first Bible, the Zodiac.

→ There are more stars in the Universe than there are grains of Sand on all the worlds beaches !

The Earth rotates on its axis at a tilt of 23 degrees, which allows for a greater surface of the earth to be tilled and makes possible the seasons.

The Earth rotates at 1000 miles per hour. If it rotated at only 100 miles per hour, the days and nights would be ten times longer.

**The summer sun would burn all vegetation and the winter's night would be incredibly cold.**

The earth is the right distance from the right-sized sun for life to Exist on earth.

If the earth were farther away from the sun, the climate would be too cold. If it were closer, it would be too hot. If the sun were smaller or larger we would either freeze or roast.

Did you know that the on the moon, in one lunar day (which is 15 earth days) the temperature varies from a high of 214 degrees above zero to 243 degrees below zero.

The earth is the right distance from the right-sized moon for life as we know it.

The ratio of the size of the moon to the earth is 10 times greater **than for any other planet's satellite** in the solar system.

If the moon were 100 times smaller, an average moon size, its brightness would be reduced by 20 times and its influence on earth would be greatly changed.

The moon is on average, 240,000 miles from earth. The gravitational pull from the moon causes the ocean tides that cleanse our shorelines and clean out the shipping channels. If the moon were only 50,000 miles from earth the gravitational pull from the moon would be so great that the ocean tides would completely submerge the surface of the earth twice per day. A smaller or larger moon would greatly increase or decrease the tides.

38. The first Light that ever struck the earth was God's spoken Word. He said, "Let there be light," and there was light. That turned darkness into light, in order to bring forth a creation of joy and life upon the earth.

Then, the Spirit of God, as It moved with love and compassion, at that great day, the first day of the dawn of creation upon the earth; the sun rose and swept across, its rays, and dried up the waters from the earth, and made an atmosphere above. And, for its first time, it was to bring joy and life to the earth, by a seed. That was a great hour.
